Jersey Wahoos Swim Club

Monday, February 19, 2007

Roger,

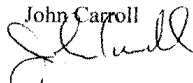

I have been meaning to drop you a note concerning the Ultra Violet system you installed on our indoor training pool. As you know, the Jersey Wahoos Swim Club gets "hammered" with hard training swimmers every day of the week. We did the chloramines fight for years. We tried the super chlorination process. We tried the non-chlorine shock and we even attempted heating the city of Mount Laurel by leaving the doors wide open in an attempt to offer our swimmers the air they needed. While we did succeed in warming the township, we pretty much failed at offering our swimmers the environment they require.

We installed the ETS Ultra Violet system in August of 2005. Since then, I can say to you and more importantly, to my clients, we no longer have chloramines. I now have a life – no more coming in at 10:00 pm to super-chlorinate and returning at 5:00 am to de-chlorinate the pool.

I would feel comfortable recommending this system to anyone who encounters chloramines on their indoor pool. I only wish I had bottled up some of the old air so when people ask "does it work?", I can let them smell for themselves. Good-bye eye burn, good-bye stinky air, hello happy patrons.

Thanks to you and the Staff at If It's Water

Sincerely,

John Carroll

Thank you again
